

Mulilo Danish Vocational Program, student information:

Examination at the Techcollege MDVP Maintenance Technology program

Dear student or applicant (prospective student),

You will notice from the program **Education Plan** and **Study Plan & Calendar** that the MDVP Maintenance Technology program is divided into a number of thematic **Modules** - specifically 15 modules within the Vocational component of the program (with a total duration of 34 weeks) and 6 modules within the Personal Growth & Leadership component (total duration: 4 weeks).

Assessment – but no testing and grading – in each module

At Techcollege, we will assess your performance in each separate module: how you participate actively during lessons and in completing exercises and project assignments - and the quality of your inputs in the classroom and the processes you perform in the workshop.

But we will assess you *only* in order to provide you with *advice and guidance on how and where you may improve your professional skills* within the theme of each module.

We will *not* test you with any formal examinations (neither in writing or orally) during the modules, and we will not issue grades for your performance.

One final Test Assignment & Presentation

The only vocational examination you will face in the program is the final Capstone Project (Module 15 in the program Vocational Component – see Education Plan). In this assignment, you will show your skills across a 14-day work process, where you individually plan, prepare, and implement a complete installation solution for a fictional building environment, which contains elements from all the major installation types you have encountered during the program. For parts of the assignment, you may be able to reuse installation plans and parts completed during earlier modules.

At the end of the 14-day Test Assignment period, you will make a presentation of your work process, your final installation product, and the documentation materials you have produced for it as part of the project.

In a similar way, the Personal Growth & Leadership (PGL) component will conclude with a 2-day process where you prepare and present a presentation of your main learning outcomes and reflections from your participation in the component. This final presentation is PGL Module 6 (see Education Plan).

Grading and Certification

In each of the two final examinations (vocational and PGL components), you will present to your teacher and an examiner appointed by Techcollege. You will be awarded with the grade: “Passed” if your performance shows that you have met the program’s proficiency goals (see goals for each module in the Education Plan) to a satisfactory extent. If not, you will be given the “Not Passed” grade.

If passed, Techcollege will issue your program completion Diploma, confirming your achieved non-formal (in the Danish education system) qualification as **Assistance Maintenance Technology Operator for Energy Systems**. To showcase and distinguish your achievement towards future employers, we recommend that you use your developed program learning **Portfolio** of the experience and learning outcomes you have acquired through your participation in the program.
